STANLEY® Security

Interoperable Communications For State and Local Government

> Bridge your systems on a single, secure network for instantaneous communication and information sharing.

Organizations should be prepared and ready to rapidly respond in the event of a critical incident. The need for immediate broadcasting and sharing of information across multiple systems can lead to breakdowns in communication and delay incident response time.

The Mutualink True Interoperability® Platform enables secure, on-demand voice, video and data transmission across various disparate devices and equipment to conveniently connect multiple agencies when an emergency strikes.

Enhance Situational Awareness

Send and receive crucial data instantly for advanced visibility to improve responsiveness or assess a potential threat.

Notify Essential Parties

Securely correspond with and signal government facilities, leaders and emergency operations centers in the event of an incident.

Easily Collaborate with Available Resources

Access a larger pool of crucial information available to your organization through internal and external resources.

Mutualink

PREPARE AND RESPOND. QUICKLY AND EASILY.

> Connects *critical information*, in the *right form*, to the *right people*, at the *right time*.

"The Mutualink solution has emerged as an essential component to solving public safety interoperability challenges on a national basis. Mutualink is a superior and affordable platform that works. And the proof is in the states and localities that use it."

Hon. Tom Ridge, Former Secretary
US Department of Homeland Security

ANY media device network... anytime

STANLEY Security has the expertise to help your organization better communicate in the event of an emergency, reducing time to incident resolution for improved outcomes.
