COLUMBUS, OH and OSKALOOSA, IA—ADB SAFEGATE Americas, LLC, and Musco Lighting have announced a partnership that will offer airports in the Americas a complete portfolio of solutions designed to improve operational performance, environmental impact, efficiency, and safety.

ADB SAFEGATE is a global leader in offering fully integrated solutions—including apron, airfield, tower, and service solutions—that support airport development and enhance operational procedures. The company works with some of the biggest airports around the world, bringing an unmatched expertise and commitment to ensuring they operate more smoothly and efficiently from approach to departure.

“Our primary objective is to help our customers operate and maintain a safer, efficient and sustainable airport,” said Joe Pokoj, CEO Americas, ADB SAFEGATE. “Our extensive experience working with airports, and Musco’s lighting expertise, creates a win-win situation. We are excited to bring our customers a cost-effective LED solution for apron lighting that will also benefit their operations and the environment.”

Musco provides industry-leading apron lighting systems for airports that improve visibility, reduce energy consumption, and help airport staff operate more safely and efficiently. With 40 years of industry experience, project management expertise from planning through installation, and customized engineering capabilities that adapt systems to the exact architectural specifications of each airport, Musco brings a distinctive set of qualifications to the partnership.

The company’s Total Light Control—TLC for LED® technology, which works as a newly-installed or retrofit system, achieves superior light quality for improved visibility, eliminates glare, and integrates with existing facility lighting systems. TLC for LED is backed by a 10-year parts and labor warranty, supported by a 170-member warranty team that provides ongoing support and service. The system has been installed at airports around the world including McCarran International Airport (LAS), Vancouver International Airport (YVR), and Los Angeles International Airport (LAX) Terminal 4.

“ADB SAFEGATE is known for helping the busiest airports all over the world operate more efficiently and smoothly with an innovative mix of intelligent solutions. We’re proud to be moving ahead together with this partnership,” said Jeff Rogers, Vice President of Musco. “We’re confident that airports across North and South America will realize some impressive benefits and evolve their operations in ways that will improve the experience for everyone.”
